

CSC 3610 – Final Project

This assignment will be the culmination of all the skills you have learned throughout the semester.

Custom Website

For your final project you will be making a site for a topic of your choice. You can make something based off of your Figma project or something completely new. The site should be a coherent set of content and leverage good web development practices.

Required Components

You have a lot of leeway on this project to make your own decisions, but there are some minimum expectations:

- Site must be a minimum of three functional pages with a reasonably substantial amount of content
- Site should have a consistent and coherent design and style
- Site must have a nav bar
- Site must include images
- Site must include custom CSS styling and/or leverage a CSS framework
- Site must include the use of JavaScript with at least one major use
 - o Major use is defined as something doing substantial JavaScript work, not simply making minor adjustments to the page content via JavaScript
- Site should demonstrate evidence of significant effort
- Site must be largely based on your own unique work

You may add additional complexity or content as you wish beyond these minimum requirements.

Publishing Your Site Online

In future classes we will explore additional options for site publication, but to at least introduce you to the idea we can leverage Github Pages to get your site online. The instructions are available here:

<https://pages.github.com/>

You don't need to create a custom domain or anything special for your site, although you are welcome to do so if you wish.

Grading Rubric

To Earn a C

- Site must include required pages as well as required HTML and CSS content
- Site provides evidence of significant student effort

To Earn a B

- Complete all C requirements
- Site includes required JavaScript components
- Site meets expectations for style and design
- Site is clearly unique work completed by student
- Site is presented during final presentations

To Earn an A

- Complete all B requirements
- Site provides evidence of significant student effort
- Site is published online using Github Pages

Submission

To submit your work, you will need to ZIP up all of the content, including any images and subdirectories you have. Be sure to include any provided items from the starter code as well. You will also provide a copy of your site URL if you published it. You will submit your file through the portal. Please let me know if you have any questions.
